

Thank you for participating in the interview process.

Please find below the list of tasks assigned to you.

Deadline: Please complete the task within **5 days of receiving this email**.

Note:

- Candidates are encouraged to complete all tasks within the given timeframe, as late submissions will result in disqualification.
- Candidates may seek help or guidance, but all submissions must be original. Directly copying or pasting content from others, AI tools, or online sources will lead to disqualification.
- The tasks are designed to assess your **individual reasoning and problem-solving abilities**, so we expect independent effort.

Wishing you the best of luck!

Task 1 : Build a URL Shortener

Objective:

Create a URL shortener web application using Python with the Django framework.

Requirements:

User Authentication:

1. Users should be able to register, log in, and log out.
2. Only authenticated users can create and manage short URLs.
3. Shortening URLs:
4. Authenticated users can input a long URL and receive a shortened version.
5. Implement a unique, short key generation algorithm for each URL (e.g., base62 encoding).
6. Ensure that short URLs redirect to the original long URLs.

URL Management:

1. Users can view a list of their created short URLs.
2. Provide options to edit or delete existing short URLs.
3. Display additional information, such as creation date and usage statistics.

Basic Analytics:

Implement basic analytics for each short URL (e.g., click count).

Display the number of clicks for each short URL.

User Interface:

Develop a clean and intuitive user interface for both creating short URLs and managing them. Ensure responsive design for a good user experience on various devices.

Bonus (Optional):

Custom Short URLs:

1. Allow users to customize the short part of the URL.
2. Ensure that custom short URLs are unique and available.
3. Expiration Time:
4. Implement the option for users to set an expiration time for short URLs.
5. QR Code Generation:
6. Provide the ability to generate QR codes for short URLs.

Submission Guidelines:

1. Provide a GitHub repository link containing your Django project.
2. Include a README.md file with instructions on how to set up and run the application.
3. Clearly document any additional features or functionalities you implemented.

Evaluation Criteria:

1. **Functionality:** Ensure that all features work as intended.
2. **Code Quality:** Well-organized, readable, and follows Django best practices.
3. **User Interface:** The application should have an intuitive and aesthetically pleasing design.
4. **Authentication:** Properly implement user registration, login, and session management.
5. **Bonus Features:** The inclusion of bonus features will be considered as an added value.
6. This task should assess the developer's ability to create a functional and user-friendly URL shortener using Django. Adjust the requirements based on your specific criteria or preferences.

Feel free to customize or expand upon this task based on the specific skills you want to evaluate or the complexity you desire.

The design and UI aren't important - just use whatever works for you like plain HTML, any library, or even Django templates

Happy coding!
